

SparCs To Farm

Rethinking The Food Potential

About SparCs

SparCs (scraps spelled backwards) is our innovative program that captures and utilizes fruit and vegetable peels, cores, tops, and trimmings from our Fresh Cuts processing facility. This successfully diverts perfectly edible, usable, and valuable food products from going to landfill while providing farmers with a nutritional supplement to traditional animal feed. Baldor's SparCs to Farm program has fed a variety of animals including hogs, cows, goats, sheep, chickens, turkeys, and ducks.
